

Our Freestanding Light Panels are made in-house at our Shrewsbury office. They work in a similar way to the standard light panel ranges. The Freestanding Light Panels have pockets that slot into the panels to allow graphics to be displayed. The LED bulbs evenly illuminate the pocket which gives the appearance that it is glowing.

Freestanding Panels also have a clear edge around the outside which allows light to escape, illuminating the edge of the entire panel.

This display is the next generation of Freestanding Panels. They will illuminate any window or office space and will grab the attention of all passers by.

The Freestanding Light Panel is made up of 3 panels sandwiched together, totalling 16mm depth:

- Back Panel = 5mm
- Clear Centre LED Panel = 6mm
- Front Panel = 5mm

The front panel has A4 portrait or A3 landscape cut-outs that allow the framed pockets (see diagram) to slot into. This makes it easy to change the graphics as frequently as required.

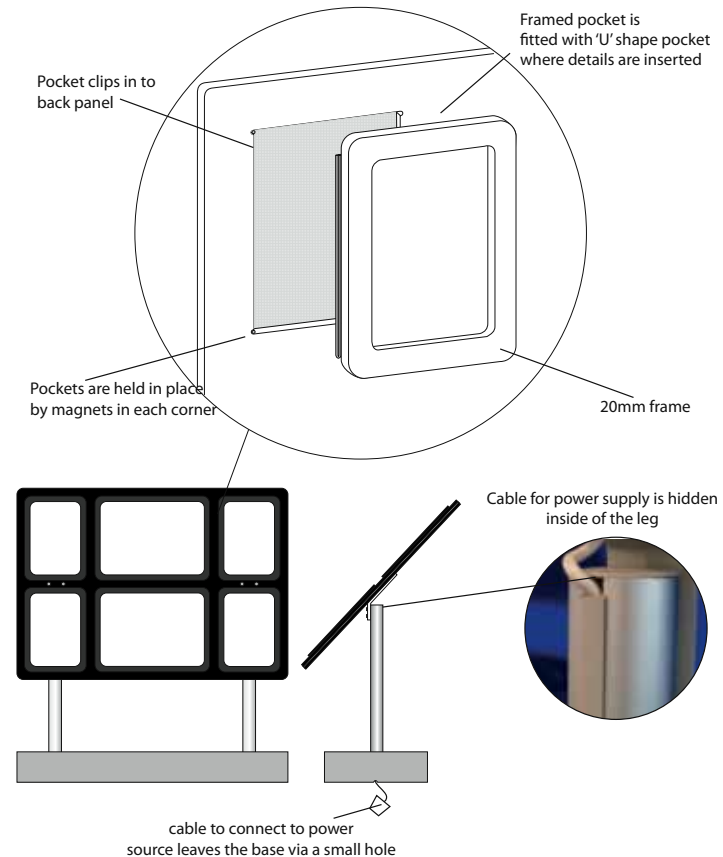

The panel is mounted using angled brackets that fit onto legs with feet and a decorative base.

Freestanding Light Panels use low voltage LED's which have a minimum life expectancy of 60,000-100,000 hours, due to their long life they are maintenance free. The LED's emit a warm bright light that evenly illuminates any graphic placed within the pocket. For best results we recommend using Backlit Paper (available on request). They are powered using a transformer and cables which are hidden inside the legs and decorative base.

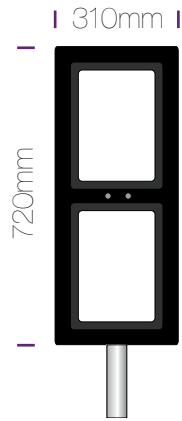

# freestanding light panels

**The Transformer needs to be plugged into a power socket - DO NOT CONNECT TO LIGHTING SYSTEM**

Freestanding Light Panels come in Black or Silver as standard, however other colours are available on request. If you would like to add a graphic or logo, get in touch with the sales team on 01743 465531 who will be happy to discuss options with you.
